

[Kind of Document] Abstract

[Abstract]

[Problem] To provide a card processing device capable of quickly processing non-magnetic cards while preventing card information on a magnetic card from being acquired illegally.

[Solution] A card processing device that handles a magnetic card and an IC card wherein, when a card is taken into a main body and if the card is a magnetic card, the inserted card is taken in by intermittently transporting the card to a predetermined position and, after that, by continuously transporting the card and, if the card is an IC card, the inserted card is taken in by continuously transporting the card. When the card is ejected out of the main body and if the card is a magnetic card, the card is ejected by continuously transporting the card to a predetermined position and, after that, by intermittently transporting the card and, if the card is an IC card, the card is ejected by continuously transporting the card.
